

Salt Pond Visitor Center Rehabilitation

The \$3 million rehabilitation of Salt Pond Visitor Center is complete.

The project has resulted in a number of improvements, such as the upgrading of utility systems; removal of hazardous substances such as lead paint and asbestos; increased accessibility; construction of a new restroom facility; installation of a septic system that reduces the discharge of nitrogen into Salt Pond; and refreshed and reconfigured interior spaces, including a new theater and multi-purpose room. Under a separate project funded through park entrance fees, a modern audio-visual system has been installed.

A next phase of work to install an airlock vestibule at the front entrance will be underway in winter 2005-2006. The building will remain open during this period.

Rangers are on duty to assist with trip planning, ranger-guided programs are underway, and the park's education partner, Eastern National, is operating the bookstore which features a variety of books, maps, puzzles, games, and other interpretive items.
